

CLAIMS:

1. An adjustment system for a door framer having opposite vertical frame members, said alignment system comprising:

5 (a) a reel having a spool with a line attached, said reel having fastener means for securing the reel to a location on said frame; and

(b) guide members having fastener means for securing said guide members to selected locations on said frame members whereby said reel and guide members may be located to extend said line in criss-cross fashion within said frame members to provide the installer a visual indication of the proper alignment.

2. The adjustment system of Claim 1 wherein said reel includes a spool with a ratchet and pawl.

3. The adjustment system of Claim 1 wherein said guide member each include a spool

4. The adjustment system of Claim 1 wherein said frame members are metal and said fastener means on said spool comprises a magnet.

5. The adjustment system of Claim 1 further including a spreader means including an axially adjustable threshold plate having head member at opposite ends engageable with said frame member.

5 6. The adjustment system of Claim 5 wherein said head members are adjustable to conform to frame members of varying shape and dimensions.
